1. Introduction

This document provides the late-breaking information about Liberica JDK 17.0.10 release.

The full version string for this update release is 17.0.10+13. The version number is 17.

2. Liberica JDK 17.0.10+13

Liberica is a certified, Java SE 17-compliant distribution of OpenJDK 17, which works on server (Linux x86_64, Linux ARM64, Windows 64), desktop (Windows 64, Mac, Linux x86_64), and embedded devices (Linux ARM64, Linux ARMv7, including Raspberry Pi 2 & 3 (ARMv6 hardfloat)). It has the following notable additions:

- Linux x86_64 version contains support for ZGC.
- Linux x86_64, ARMv8 and ARMv7 distributions include a choice of Client VM, Server VM and Minimal VM.
- Alpine Linux x86_64 and aarch64 are built with musl support.
- Windows x86_64, Windows ARMv8, Mac, Linux x86_64, and Linux ARMv7 distributions contain OpenJFX 17.
- Linux ARMv7 distribution contains Device IO API compiled for Raspberry Pi.

Refer to the Oracle JDK 17.0.10 release notes for further information on JDK 17 features. This document further outlines the peculiarities of Liberica distribution as compared to Oracle JDK 17 distribution.

3. Liberica JDK 17 distribution

Liberica JDK 17 is distributed as .rpm, .zip, .deb and .tar.gz packages. Please select the most appropriate for your purposes.

Liberica JDK 17 introduced all [new features](#) supported by OpenJDK 17.

With the introduction of the Jigsaw feature in JDK 9 and Minimal VM it is now possible to create a Runtime that is sufficient to run your application and trim down the size of the Runtime. To generate a Runtime with just the Minimal VM, add `--vm=minimal` to `jlink` options.

By default, the Liberica uses Server VM. Server VM and Client VM can be enabled with `-server` and `-client` command line options, respectively. In case the deployment requires to minimize the footprint, it may be beneficial to use Minimal VM, which emphasises on a minimal footprint. It has C1 JIT compiler only, Serial GC and no serviceability features.

4. Security Baselines

BellSoft Liberica follows the security baselines for Oracle Java SE. Please refer to the Oracle documentation for a list of issues fixed in a given release.

7. Notable Issues

This is the list of the notable issues fixed in this release.

Issue ID: **JDK-8315551**

Summary: Increase `jdk.jar.maxSignatureFileSize` default size, which is too low for JARs such as WhiteSource/Mend unified agent jar

Description: `jdk.jar.maxSignatureFileSize` default size of 8MB was too low and caused errors. The fix increased the default value to 16MB.

Issue ID: **JDK-8315836**

Summary: Add Certigna Root CA - 2

Description: The Certinga root certificate has been added to the cacerts truststore.

Issue ID: **JDK-8318664**

Summary: Creating a non-static nested class without enclosing class throws `VerifyError`

Description: Now a static child class of a non-static class without enclosing class (`EnclosingClass`) throws a compiler error at compile time instead of the `VerifyError` at runtime.

Issue ID: **JDK-8318933**

Summary: Add Telia Root CA v2

Description: Telia root certificate was added.

Issue ID: **JDK-8319144**

Summary: Add KEEPALIVE Extended Socket Options Support for Windows

Description: The mssql-jdbc driver uses the `keepAliveTime` and `keepAliveInterval` socket options to maintain idle connections to the server. However, this feature of maintaining idle connections by driver was only supported on Linux and Mac. The support for the KEEPALIVE socket options was implemented within the JDK for Windows.

Issue ID: **JDK-8319819**

Summary: Add Let's Encrypt ISRG Root X2

Description: New Let's Encrypt root certificates were added.

Issue ID: **JDK-8320376**

Summary: Add an approximation of total bytes allocated on the Java heap by the JVM

Description: A new method (`com.sun.management.ThreadMXBean.getTotalThreadAllocatedBytes()`) was added, which returns an approximation of the total number of bytes allocated by the JVM on the Java heap since JVM launch.

Issue ID: **JDK-8320395**

Summary: Add four DigiCert root certificates

Description: Four new DigiCert root certificates were added.

Issue ID: **JDK-8320513**

Summary: Call `X509KeyManager.chooseClientAlias` once for all key types

Description: The method is now called once with all possible key types. The javadoc was changed to indicate that the method might be called several times during a single key resolution, and that not all possible key types may be presented in a single call.
