Notable Changes

This is the list of the notable issues fixed in this release.

Issue ID	
JDK-8245545	<p data-bbox="568 916 1094 949">Summary: Disabled TLS_RSA cipher suites</p> <p data-bbox="568 990 1406 1715">Description: The TLS_RSA cipher suites have been disabled by default, by adding 'TLS_RSA_*' to the <code>jdk.tls.disabledAlgorithms</code> security property in the <code>java.security</code> configuration file. The TLS_RSA cipher suites do not preserve forward-secrecy and are not commonly used. Some TLS_RSA cipher suites are already disabled because they use DES, 3DES, RC4, or NULL, which are disabled. This action disables all remaining TLS_RSA cipher suites. Any attempts to use cipher suites starting with 'TLS_RSA_' will fail with an <code>SSLHandshakeException</code>. Users can, at their own risk, re-enable these cipher suites by removing 'TLS_RSA_*' from the <code>jdk.tls.disabledAlgorithms</code> security property. The following previously enabled cipher suites are now disabled: TLS_RSA_WITH_AES_256_GCM_SHA384, TLS_RSA_WITH_AES_128_GCM_SHA256, TLS_RSA_WITH_AES_256_CBC_SHA256, TLS_RSA_WITH_AES_128_CBC_SHA256, TLS_RSA_WITH_AES_256_CBC_SHA, TLS_RSA_WITH_AES_128_CBC_SHA.</p>

Issue ID	
JDK-8311906	<p>Summary: Improved robustness of String constructors with mutable array inputs</p> <p>Description: A warning was added to the constructors of String, and the methods of StringBuilder and Appendable that modification of arrays or CharSequence arguments can result in unspecified results.</p>
JDK-8340321	<p>Summary: Disabled SHA-1 in TLS/DTLS 1.2 handshake signatures</p> <p>Description: The SHA-1 algorithm has been disabled by default in TLS 1.2 and DTLS 1.2 handshake signatures, by adding <code>rsa_pkcs1_sha1 usage HandshakeSignature</code>, <code>ecdsa_sha1 usage HandshakeSignature</code>, <code>dsa_sha1 usage HandshakeSignature</code> to the <code>jdk.tls.disabledAlgorithms</code> security property in the <code>java.security</code> config file. RFC 9155 deprecates the use of SHA-1 in TLS 1.2 and DTLS 1.2 digital signatures. Users can, at their own risk, re-enable the SHA-1 algorithm in TLS 1.2 and DTLS 1.2 handshake signatures by removing <code>rsa_pkcs1_sha1 usage HandshakeSignature</code>, <code>ecdsa_sha1 usage HandshakeSignature</code>, <code>dsa_sha1 usage HandshakeSignature</code> from the <code>jdk.tls.disabledAlgorithms</code> security property.</p>
JDK-8345213	<p>Summary: Changes to the Default Time Zone Detection on Debian-based Linux</p> <p>Description: On Debian-based Linux distributions such as Ubuntu, the <code>/etc/timezone</code> file was previously used to determine the JDK's default time zone (<code>TimeZone.getDefault()</code>). According to Debian's Wiki, <code>/etc/localtime</code> is now the primary source for the system's default time zone, making <code>/etc/timezone</code> redundant. As a result, the JDK's default time zone detection logic has been updated to use <code>/etc/localtime</code> instead of <code>/etc/timezone</code>. If <code>/etc/localtime</code> and <code>/etc/timezone</code> are inconsistent for any reason, the JDK's default time zone is now determined solely based on <code>/etc/localtime</code> file.</p>

Issue ID	
JDK-8364556	<p>Summary: Disabled <code>SymbolTableStatistics</code> and <code>StringTableStatistics</code> in <code>default.jfc</code></p> <p>Description: <code>SymbolTableStatistics</code> and <code>StringTableStatistics</code> events are disabled in <code>default.jfc</code>. It is sufficient for them to be enabled in <code>profile.jfc</code>.</p>
JDK-8364993	<p>Summary: Disabled <code>jdk.ModuleExport</code> in <code>default.jfc</code></p> <p>Description: Some applications with lots of code can produce an enormous number of <code>ModuleExport</code> events and associated constant pool data. These events provide practically no value. <code>jdk.ModuleExport</code> has been disabled in <code>default.jfc</code>. Users who want to diagnose module exports can easily run a small recording using the profile setting, or opt-in for the event as follows: \$ java -XX:StartFlightRecording:settings=profile ...; \$ java -XX:StartFlightRecording:jdk.ModuleExport#enabled=true ...</p>
JDK-8365086	<p>Summary: <code>CookieStore.getURIs()</code> and <code>get(URI)</code> return an immutable List</p> <p>Description: <code>CookieStore.getURIs</code> now returns 'an immutable list of URIs and returns an empty list if no cookie in this cookie store is associated with an URI' based on its JavaDoc.</p>

Issue ID

JDK-8367237

Summary: Added a thread-Safety Usage Warning for `java.text.Collator` Classes

Description: Re-using a `java.text.Collator` instance in a multi threaded environment leads to slower than expected performance. Since the state is mutable, and thread-safety achieved via synchronization, concurrent usage leads to threads stuck in a blocked state for significant periods of time. Using a dedicated instance per each thread leads to better performance and (of course) resolves the thread contention issues reported when using a single instance concurrently. Note that since the `Collator` and `RuleBasedCollator` classes are designed to be thread-safe and it is not a goal to label all such implementations as non thread-safe, the following wording is done as implementation-specific. An implementation note is provided suggesting to users that creating a new `Collator` instance per each thread is the suggested approach. It also calls out the potential thread contention when used otherwise. This applies to both `Collator` and `RuleBasedCollator`, where the former (which is an abstract class) warns about instances returned by the factory methods when the standard provider is in use.

JDK-8370214

Summary: [21u] Removed `-Xdebug` and `-Xnoagent` from tests: backport parts of 8227229 and 8312072

Description: The `-Xdebug` and `-Xnoagent` options were removed from tests.

Builds of Liberica JDK With CRaC

This release of Liberica JDK includes full CRaC support. CRaC support is available for Liberica JDK 17 and 21. For more information, see [Using CRaC with Java applications](#).

IANA TZ Data version

This release of Liberica JDK 21.0.10 comes with the 2025b version of the in-tree copy of the [IANA timezone database](#). The following are the key features of this version.

Future Timestamps

New Time Zone:

A new time zone, America/Coyhaique, is created for Chile's Aysén Region, which will now observe UTC−03 year-round (no daylight saving time).

- This diverges from America/Santiago starting March 20, 2025.
- Aysén will not change clocks on April 5, 2025.
- This aligns Aysén with Magallanes Region.

Past Timestamps

Iran Time Change Correction:

Iran changed from UTC+04 to UTC+03:30 on November 10, 1978, not at the end of the year as previously recorded.

Code Fixes

Improved behavior for the zic tool:

- It no longer creates invalid symlinks when using -l with multiple arguments.
- A buffer underflow issue is resolved.

For more information, see [JDK-8352716](#).

3. Known Issues

This release does not contain any known issues.
